

HydroBikes®

Discover how much more fun you can have on the water.
make waves on a Hydrobike

Introducing **HydroBikes[®]**
By ShoreMaster

the personal watercraft that put a whole new spin on water recreation.

"You don't have to be an Olympic athlete to reap the benefits of water cycling... recreational water cyclists burn as many calories as skaters, kayakers, high-impact aerobic participants, even joggers."

*-John Howard
Three-time Olympian*

Hydrobikes go faster, ride easier, maneuver better and give you surprising stability in the water. So you can explore more places, experience more activities and enjoy the ride like never before. Keeping fit was never so easy and so much fun. This is real off-road biking, with the whole lake, river or shoreline at your feet.

Steer a course for more fun on the water. Hydrobikes are designed and built to perform virtually maintenance-free, season after season. It's an investment you and your family will never stop enjoying. It's free-spirited fun for every age, from 8 to 80.

"Hydrobikes are great fun at our youth camps. But more importantly, they're a great way to spend quality time with the kids in a quiet, calm and enjoyable setting."

-Pastor Ken Carlson

The Hydrobike

The 2-Person Hydrobike

Engineered for fun and value

The exceptional quality of Hydrobikes is evident in every feature. They are geared for high-performance and low maintenance. You will be amazed at how little effort it takes to pedal on a lake, river or ocean.

Built for safety

From its stability to its high visibility on the water, the Hydrobike is engineered for a safe, reliable ride.

Propeller-driven for the fastest performance

This is no slow paddle boat. The Hydrobike's computer-designed propulsion system features a 90% efficient propeller which allows you to achieve cruise speeds of 4-6 mph with minimum effort.

High-performance propulsion system

The lower drive train is sealed water-tight, providing protection even in salty seawater. The chain uses environmentally friendly lubricants.

Surprisingly strong, light and fast

The Hydrobike's pontoons were scientifically developed by a professional canoe designer for optimum buoyancy, speed and maneuverability. That means you will have a smooth ride even in very choppy water.

Incredibly steady and sturdy

Stable enough to dive from, the Hydrobike can also handle rough water conditions, including five foot ocean swells.

Peace and quiet

The Hydrobike is engineered for silence. It won't disturb wildlife habitats—or fishing holes.

Totally portable

Fits in most mini-vans and SUV's. One person can assemble and disassemble the Hydrobike in minutes, without any tools

Shallow water is no problem

Ideal for narrow and shallow water, the Hydrobike can operate in less than one foot of water. If the drive train and propeller encounter rocks or sand, it automatically pivots up and over the obstacle. You can even pedal right up onto the beach without damaging the propeller or rudder.

E-Z Carrying straps (optional)

Loading and unloading is a breeze.

Built-in storage compartment

Stow extra clothes, beverages and cargo. There's even a handy cup holder.

"...we find the Hydrobike a refreshing new technology which promotes our vision for the safe, non-polluting, non-intrusive sharing of our lakes."

—Conservation Trust
Meredith, New Hampshire.

A recent study conducted by Frank Katch, Professor of Exercise Science at the University of Massachusetts, and Victor Katchwater, Professor of Movement Science at the University of Michigan, found that moderate water cycling (about 60% maximum) burned an average of 546 calories per hour. The caloric burn is 8% greater than outdoor bicycling at a speed of 10 to 12 miles per hour.
